Professional Summary

Recent Bachelor of Science in Information Technology graduate majoring in System Development with hands-on experience gained through internship and academic projects. Skilled in web and mobile application development using React, Flutter, .NET, Node.js, and database technologies including PostgreSQL and MongoDB. Strong problem-solving abilities, eagerness to learn new technologies, and a passion for building efficient, user-focused software solutions. Seeking an entry-level opportunity to contribute technical skills while growing as a software developer.

Education

PHINMA - UNIVERSITY OF PANGASINAN

Dagupan City, Philippines

Bachelor of Science in Information Technology Major in System Development

June 2026

Capstone Project: Disability Careers – Connecting Talents with Accessible Job Opportunities

Relevant Experience

Cooperative Development Authority (CDA) – Routing System Intern
(React, Typescript, C#, .Net, PostgreSQL)

January 2026 – April 2026

- Developed a paperless document routing system to streamline internal document workflows.
- Implemented file upload and sharing functionalities for efficient document management.
- Developed a real-time chat and announcement system to improve communication among users.
- Enhanced workflow transparency through document tracking and routing features.
- Reduced manual paperwork and improved operational efficiency through digital automation.

Disability Careers – Capstone Project (React, Express.js, MongoDB)

January 2025 – October 2025

- Developed a job-matching platform that connects persons with disabilities (PWDs) with inclusive employers.
- Provided accessible job opportunities for PWDs while supporting companies in adopting inclusive hiring practices and improving workplace accessibility.
- Integrated job postings from companies committed to disability inclusion.
- Implemented filtering options that match job seekers to roles based on their skills and needs.

Gear Brawl – Multiplayer Game (Unity, C#, Photon)

February 2025 – March 2025

- Developed a real-time multiplayer game in Unity using Photon to enable online gameplay
- Implemented core systems such as matchmaking, lobby creation, and player synchronization for seamless multiplayer experience
- Conducted testing and debugging to optimize performance and enhance overall user experience

AJ AutoFix – Car Repair Booking System (Flutter, Node.js, MongoDB, Express.js)

September 2024 – October 2024

- Developed a full-stack vehicle service booking platform enabling users to schedule maintenance and repair services
- Added multiple service categories including tire replacement, windshield repair, and oil changes
- Integrated real-time notifications for booking confirmations and status updates
- Built a secure backend using Node.js and MongoDB to manage users, bookings, and service data efficiently

Certifications

- Cybersecurity Fundamentals IBM
 - Onboarding Training: Cooperative Development Authority (CDA)
 - Argentina to the World: Overcoming Challenges and Embracing Opportunities
 - Innovating Research Forums: Applying Design Thinking for Transformative Outcomes
- June 2026
 - April 2026
 - March 2025
 - December 2024

Technical Skills

Programming Languages:

Python, JavaScript, TypeScript, C#, Kotlin, Dart, HTML, CSS

Frameworks & Technologies:

React, Flutter, Node.js, Express.js, .NET

Databases:

MySQL, MongoDB, PostgreSQL

Tools & IDEs:

Git, GitHub, Visual Studio Code, Android Studio, Figma, Cisco Packet Tracer

Other Tools:

Microsoft Office (Excel, Word, PowerPoint), Canva, CapCut

Operating Systems:

Windows
